

Coach Stops

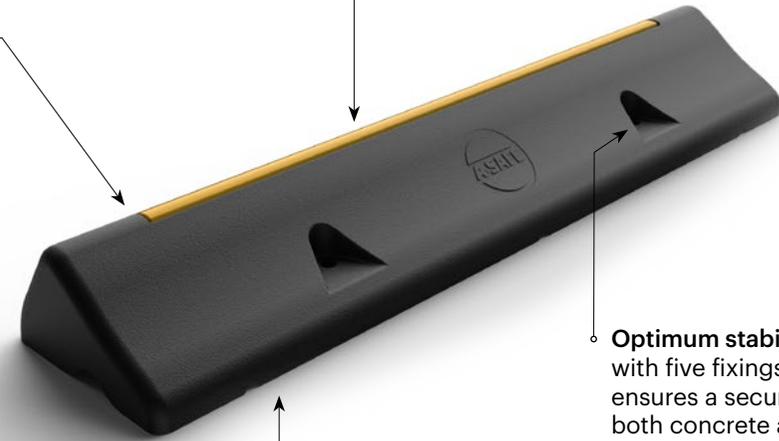

Designed for use with low-set vehicles such as coaches, buses and delivery trucks, Coach Stops are ideal for distribution and logistics locations, along with transportation locations such as airports, bus terminals and coach stations.

Manufactured from high performance recycled rubber, Coach Stops are weather and crack resistant, and maintain their form under pressure, restraining vehicles, preventing movement and avoiding danger from vehicles drifting from designated locations.

High visibility markings mean the Coach Stop can be easily seen by both drivers and pedestrians.

Ultra-low maintenance material is chemical and water resistant, non-corrosive, non-scratch and self coloured so no repainting, cracking, rusting, flaking or corrosion.

Self coloured and UV stabilised for continued high visibility and long lasting aesthetics with no repainting.

Optimum stability with five fixings per unit ensures a secure fastening on both concrete and tarmac.

Significant return on investment from incident prevention and downtime avoidance as Coach Stop, vehicles, floors and infrastructure do not need replacing or repair.
